From the graph shown below we can say that Wendy's is cleaner than Mc-Donald's, as it never received grades beyond P. Wendy's received A or B grade most of the times and a P grade once. Whereas, McDonald's received Z grades too. So, we can answer the question as, No Mcdonald's is not cleaner than Wendy's.

```
> library(ggplot2)
> ggplot(data=x, aes(x=GRADEDATE, y=CURRENTGRADE, fill=DBA))+
+    geom_bar(stat="identity", position=position_dodge())
```
